

SPECIAL ANNIVERSARY SEMINAR

To Celebrate the 100th Birthday of Emeritus Professor Mel Green

The College of Biological Sciences and
The Storer Endowment are Co-
Sponsoring a Special Seminar

**Wednesday August 31, 2016
10:30 A.M.
Giedt Hall 1002**

SEMINAR TITLE

**"MEL AND HIS MUTANTS: A
COLLABORATION THAT TAUGHT A
BIOCHEMIST ABOUT THE WONDER
OF THE FLY"**

SPEAKER

**Professor Pamela Geyer,
Carver College of Medicine,
University of Iowa**

During her post-doctoral studies, Dr. Geyer began a fruitful and fun collaboration with Dr. Mel Green, resulting in the publication of a body of work that provided molecular insights into mechanisms of *P-element* mobilization and gene conversion, as well as evidence that transvection involves enhancer action *in trans*. This productive collaboration set the stage for Dr. Geyer's independent research program at the University of Iowa, where she is currently a Professor of Biochemistry. Dr. Geyer has built an internationally recognized research program focused on understanding molecular mechanisms of insulator action, tissue-specific gene regulation, and how nuclear organization impacts stem cell homeostasis.
