

Join us for a conversation about health science in the Sacramento community. Scientists share their research and perspectives, while addressing your questions.

## **JULY TOPIC | IMPORTANCE OF GUT HEALTH – EXPLORING THE BENEFITS OF BREAST MILK**

Protection against infection, disease, allergies and other health conditions affecting our society starts as early as infancy...in our intestines! Researchers are discovering an alarming shift in the kinds of bacteria present in the intestines of babies born today compared to babies born a few decades ago. What we can do to improve the health of future generations is the topic of this month's Community Conversations Science Café.

## **SPEAKER | DR. MARK UNDERWOOD**

A pediatrician and neonatologist for over 30 years, Dr. Underwood not only cares for premature babies in the UC Davis neonatal intensive care unit, he also works with researchers in the Departments of Chemistry, Food Science and Technology, Viticulture and Enology, and the School of Veterinary Medicine.

**WHEN | THURSDAY, JULY 27 | 6 – 8 PM**

**WHERE | OLD SOUL @ FORTY ACRES | 3434 Broadway, Sacramento, CA 95817**

Light refreshments provided

For questions contact: Fatima T. Malik, CEnR Specialist | (916) 703-9138 | [ftmalik@ucdavis.edu](mailto:ftmalik@ucdavis.edu)
