

The University Of California Davis, Genome Center presents:

Dr. Stephen (Fringy) Richards
Associate Professor, Baylor College of Medicine
Human Genome Sequencing Center

“Genomic Innovation within the Phylum Arthropoda”

Dr. Stephen Richards has a broad background in genomics, with a focus on quantitative traits in insect models, arthropod comparative genomics, methods for genome sequencing, assembly and annotation, and a history in human genetics. He has most recently been working the genome sequencing of arthropod species as part of the i5K initiative to sequence 5,000 insects, and is a member of the Earth BioGenome Project - an initiative to sequence the genomes of all species on planet earth.

**Monday, June 4, 2018
4:00 – 5:00 PM
Genome and Biomedical Sciences Facility, 4202**
